Comprehensive coverage of IP MPLS Ethernet backhaul technologies and solutions for 3GPP mobile network systems such as LTE HSPA and GPRS Focusing on backhaul from a radio network viewpoint Mobile Backhaul combines perspectives on mobile networks and transport network technologies focusing on mobile backhaul specific functionalities which are essential in building modern cost efficient packet networks for mobile systems IP MPLS and Carrier Ethernet The key functions required for this process Synchronization Resiliency Quality of Service and Security are also explained The reader benefits from a view of networking technology from a radio network viewpoint which is specific to this application as well from a data centre and more IT oriented perspective The book bridges the gap between radio and backhaul viewpoints to provide a holistic understanding Organized into two parts the book gives an advanced introduction to the principles of the topic before moving on to more specialized areas Part 1 gives a network level overview with the purpose of presenting the mobile network application its protocols interfaces and characteristics for the backhaul This section also presents the key packet networking technologies that are most relevant for the radio network Part 2 offers selected case studies in Synchronization Resiliency QoS and Security and gives example solutions for mobile operator owned and leased mobile backhaul cases building on the network view given in Part 1 Both radio network experts and IP networking experts will benefit from the treatment of essential material at the borderline between the radio and backhaul technologies Key features Unique view and coverage of both the radio network and the packet mobile backhaul Includes a view into the economic motivation for a packet based mobile backhaul and discusses scenarios of a migration to the new technology Covers 2G 3G HSPA HSPA and LTE in radio technologies as well as MWR Sonet SDH Ethernet Carrier Ethernet MPLS and IP in networking technologies **Metro**

Ethernet Services for LTE Backhaul Roman Krzanowski, 2013 The backhaul portion of the network is comprised of intermediate links between the core network and the small sub networks at the edge of the entire hierarchical network This is a critical area because it is the side of the network that communicates with the global Internet This practical resource serves as a comprehensive guide to designing mobile Ethernet backhauling MEBH services in metro areas using carrier Ethernet CE architecture For the first time in any book you find detailed advice on how to put together the many elements of

the CE toolbox to create a coherent working design for a specific MEBH service Like solving a difficult jigsaw puzzle you learn how all the CE components and standards interact and gain knowledge of their interdependencies You also gain insight into the tradeoffs and consequences associated with selection of specific components for a particular project

LTE Small Cell Optimization Harri Holma,Antti Toskala,Jussi Reunanen,2016-01-19 LTE network capabilities are enhanced with small cell deployment with optimization and with new 3GPP features LTE networks are getting high loaded which calls for more advanced optimization Small cells have been discussed in the communications industry for many years but their true deployment is happening now New 3GPP features in Release 12 and 13 further push LTE network performance This timely book addresses R Latest 3GPP evolution to Release 13 and LTE optimization and learnings from the field

Resource Management for Heterogeneous Networks in LTE Systems Rose Qingyang Hu,Yi Qian,2014-03-21 This SpringerBrief provides an in depth look at the key issues that affect the performance of heterogeneous networks and presents schemes that can effectively tackle these issues In particular this book discusses unbalanced traffic load among the macro and micro Base Stations BSs caused by the transmit power disparity and a load balancing based mobile association scheme to balance the traffic load among the macro and micro BSs This book also introduces a fractional frequency reuse FFR scheme with proper power control to help reduce interference at the UEs which are most vulnerable to such intra cell interference The last section investigates radio resource allocation issues for heterogeneous networks with cooperative relays and proposes a resource allocation framework that could achieve proportional fairness among the UEs Numerical results are provided to demonstrate the effectiveness of the proposed solutions in tackling the problem and improving network performance

Resource Management for Heterogeneous Networks in LTE A Systems is designed for researchers and professionals working in networking and resource management The content is also valuable for advanced level students in computer science and electrical engineering
