Resources in Education ,1994 *Linguistic Fundamentals for Natural Language Processing* Emily M. Bender,2022-05-31

Many NLP tasks have at their core a subtask of extracting the dependencies who did what to whom from natural language sentences

This task can be understood as the inverse of the problem solved in different ways by diverse human languages namely how to indicate the relationship between different parts of a sentence

Understanding how languages solve the problem can be extremely useful in both feature design and error analysis in the application of machine learning to NLP

Likewise understanding cross linguistic variation can be important for the design of MT systems and other multilingual applications

The purpose of this book is to present in a succinct and accessible fashion information about the morphological and syntactic structure of human languages that can be useful in creating more linguistically sophisticated more language independent and thus more successful NLP systems
