Scientific and Technical Aerospace Reports, 1995 **Spatio-Temporal Modeling and Device Optimization of Passively Mode-Locked Semiconductor Lasers** Stefan Meinecke, 2022-03-26 This thesis investigates passively mode locked semiconductor lasers by numerical methods The understanding and optimization of such devices is crucial to the advancement of technologies such as optical data communication and dual comb spectroscopy The focus of the thesis is therefore on the development of efficient numerical models which are able both to perform larger parameter studies and to provide quantitative predictions Along with that visualization and evaluation techniques for the rich spatio temporal laser dynamics are developed these facilitate the physical interpretation of the observed features The investigations in this thesis revolve around two specific semiconductor devices namely a monolithically integrated three section tapered quantum dot laser and a V shaped external cavity laser In both cases the simulations closely tie in with experimental results which have been obtained in collaboration with the TU Darmstadt and the ETH Zurich Based on the successful numerical reproduction of the experimental findings the emission dynamics of both lasers can be understood in terms of the cavity geometry and the active medium dynamics The latter in particular highlights the value of the developed simulation tools since the fast charge carrier dynamics are generally not experimentally accessible during mode locking operation Lastly the numerical models are used to perform laser design explorations and thus to derive recommendations for further optimizations **Sauer's Manual of Skin Diseases** Brian J. Ultrafast Photophysics and Photochemistry of Radical Precursors in Solution Thomas Wolf, 2013 The photoinduced dynamics of radical precursors in solution were investigated by means of femtosecond transient absorption spectroscopy assisted by quantum chemical calculations The investigated systems show a wide range of excited state lifetimes ranging from tens of femtoseconds to nanoseconds Thus in the first case on the investigated time scale the dynamics of the generated radicals can be additionally investigated In the latter case only the excited singlet lifetime is observable

Plant Tissue Culture Manual - Supplement

7 K. Lindsey, 2013-11-11 Plant tissue culture has a long history dating back to the work of Gottlieb Haberlandt and others at the end of the 19th century but the associated concepts and techniques have reached a level of usefulness and application which has never been greater. The technical innovations have given new insights into fundamental aspects of plant differentiation and development and have paved the way to the identification of strategies for the genetic manipulation of plants. It is the aim of this manual to deliver a broad range of these techniques in a form which is accessible to students and research scientists of diverse backgrounds including those with little or no previous experience. The themes of the manual aim to reflect those research areas which have been advanced by tissue culture technology. As was the case for the sister volume *Plant Molecular Biology Manual*, the objective has been from the start to produce a manual which is at home on the laboratory bench. The plastic covered ring bound format has proved to be most popular and is retained here. Equally the emphasis has been on producing a collection of detailed step by step protocols each supplemented with an introductory text and practical footnotes to provide the next best thing to a supervisor at one's shoulder.

Molecular Physics and Elements of Quantum Chemistry Hermann Haken, Hans Christoph Wolf, 2013-04-18 Since the publication of the first edition of this book there have been many important new developments in the field of molecular physics. The new methods and results which are most significant for students are treated extensively in this second edition. Among these are in particular single molecule spectroscopy and the field of molecular electronics which is in a stage of rapid development including the areas of electroluminescence and organic light emitting diodes. In addition we have extended and corrected the earlier material in a number of places. We have also included exercises in this new edition they will allow students to deepen their understanding and offer a basis for further individual study. The complete solutions to the exercises can be found on the Internet under www.springeronline.com 3 540 40792 S. We are grateful to Mr C D Bachem and Dr Th Schneider of the Springer Verlag for their continuous and very agreeable cooperation during the preparation of the book. We thank our colleague Prof W D Brewer for his competent translation. Stuttgart February 2004 H Haken H C Wolf. Preface to the First Edition. This textbook is intended for use by students of physics, physical chemistry and theoretical chemistry. The reader is presumed to have a basic knowledge of atomic and quantum physics at the level provided for example by the first few chapters in our book *The Physics of Atoms and Quanta*.

Introduction to Radiative Heat Transfer Michael F. Modest, 2025-10-01 Michael Modest's *Introduction to Radiative Heat Transfer* provides instructors and students a concise more affordable alternative to the author's comprehensive signature textbook and reference *Radiative Heat Transfer* while retaining all of the content required for a one semester senior undergraduate or graduate course on thermal radiation.
