
HESI RN Case Study: HIV/TB A+ Latest

Raymond Malone, age 45 years admitted from his healthcare provider's office (HCP) to the acute care facility. Jeff was diagnosed HIV positive 2 years ago. His history includes fatigue, a productive cough, and weight loss. A tuberculosis(TB) test was administered in the healthcare provider's office. Admission prescriptions include "isolation precautions for suspected pulmonary tuberculosis." See following questions...

The nurse admits Raymond to a private room at the end of the hall. According to hospital protocol, the nurse put on a mask before starting the admission process. Raymond tells the nurse that his significant other is downstairs and that he would like for him to stay in the room with him.

1. How should the nurse respond?

"He may stay but only if he wears a mask"

Raymond's significant other may stay in the room, but he should wear a mask to help decrease the possibility of contracting the TB organism.

Raymond's significant other, Brandon, arrives. Raymond wants to know why a mask is necessary for people entering his room.

2. What teaching should the nurse implement?

Explain that the Tuberculosis(TB) organism is most often spread through the air.

When an infected person coughs or sneezes, they produce infectious droplets that can be breathed in by another person. This answer provides Raymond with the scientific rationale for wearing a mask.

Safety and Infection Control

The unlicensed assistive personnel (UAP) asks why Raymond could not be in an empty semiprivate room closer to the nurses station so that the staff would not have to walk so far to provide care.

3. What information should the nurse provide to the UAP on infection control services?
