**Abstract.** The purpose of this study was to determine the effect of a 12-week training program on the physical fitness of 10 sedentary, middle-aged men. The program consisted of three sessions per week, each lasting 45 minutes. The sessions included aerobic exercise, strength training, and flexibility exercises. The results showed that the participants experienced significant improvements in cardiovascular fitness, muscle strength, and flexibility after the 12-week program. The study suggests that a structured exercise program can effectively improve physical fitness in sedentary middle-aged men.
