
MEDSURG HESI PN A+GRADE **(QUESTIONS AND ANSWERS)**

A 70-year-old client status post hip replacement is transferred to a rehabilitation facility. Which scale should the practical nurse (PN) identify as the best tool to predict the client's risk for developing skin breakdown?

- a. Braden Scale
- b. Morse Scale
- c. Aldrete Scale
- d. Wong-Baker Face Scale - a. Braden Scale

The Braden Scale is made up of six subscales: sensory perception, moisture, activity, mobility, nutrition, and friction and shear. A hospitalized adult with a score 16 or below or an older adult with a score of 18 or below is at an increased risk for skin breakdown.

A client comes to the clinic and reports the presence of a painful lesion in the genital area; they described it as a blister 2 days earlier that is now crusty. Which intervention should the practical nurse (PN) implement first?

- a. Ask the client if they have had unprotected sex.
- b. Prepare the client for a culture and sensitivity test of the lesion.
- c. Inform the client this occurrence will have to be reported to the public health department.
- d. Prepare to administer penicillin intramuscularly into the dorsogluteal area. - a. Ask the client if they have had unprotected sex.

Rationale:

These are typical signs and symptoms of herpes simplex virus 2 (HSV2), a sexually transmitted disease (STD), so the PN should ask the client if they had unprotected sex and if the client has exposed others to the disease.

A client demonstrated pupillary constriction when a pen light was shined in their eyes. Which nursing action should the practical nurse perform?

- a. Report the finding to the health care provider.
- b. Record the finding on the assessment notes.
- c. Assess blood pressure to rule out hypertension.
- d. Record that the client has poor vision. - b. Record the finding on the assessment notes.

Pupillary constriction to light is a normal finding and should be documented in the assessment notes.

Hesi Medsurge Testbank 2014
