Resources in Education , 1999 Zoological Record , 1990 *Organizing for Policy Influence* Benjamin Farrer, 2017-08-09 In this book Benjamin Farrer explains how activists can influence the policies they care about even when they are outnumbered and their issues are ignored The solution lies in a surprising place organizational choice Different types of organizations will be more influential under particular democratic institutions If they choose the optimal type of organization given their institutional context then even minority groups can be influential Environmentalists are a key example of how small groups can sometimes punch above their weight Environmentalists in different countries have made different organizational choices These choices explain whether or not they succeeded in influencing policy In the empirical chapters that follow Farrer shows that environmentalists can sometimes be more influential if they form interest groups but under other institutions political parties are the optimal organizational choice Although interest groups are often easier to create national institutions can sometimes insulate mainstream politicians from niche interest groups When institutions deny access to interest groups activists are forced to send the stronger signal of party entry Using a variety of methods including a formal model an experiment and a wealth of empirical data from a variety of settings Farrer proves that this theory of organizational choice adds to our understanding of several crucial phenomena First it helps explain patterns of political participation by showing the importance of instrumental rather than purely expressive motivations for activism Second it

provides an important modification to Duverger's 1954 law by showing that new party entry is a function not only of electoral rules but also of the rules that govern interest groups Third it extends research on the role of institutions in determining policy outputs by showing that policy outcomes are a function of the interaction between organizational choices and institutional context

System Innovation for Sustainability 1 Arnold Tukker, Martin Charter, Carlo Vezzoli, Eivind Stø, Maj Munch Andersen, 2017-09-08 Sustainable consumption and production SCP was adopted as a priority area during the World Summit on Sustainable Development in Johannesburg in 2002 and has since become one of the main vehicles for targeting international sustainability policy Sustainable consumption focuses on formulating equitable strategies that foster the highest quality of life the efficient use of natural resources and the effective satisfaction of human needs while simultaneously promoting equitable social development economic competitiveness and technological innovation But this is a complex topic and as the challenges of sustainability grow larger there is a need to re-imagine how SCP policies can be formulated governed and implemented The EU funded project Sustainable Consumption Research Exchanges SCORE consists of around 200 experts in the field of sustainable innovation and sustainable consumption The SCORE philosophy is that innovation in SCP policy can be achieved only if experts that understand business development sustainable solution design consumer behaviour and system innovation policy work together in shaping it Sustainable technology design can be effective only if business can profitably make the products and consumers are attracted to them To understand how this might effectively happen the expertise of systems thinkers must be added to the mix System Innovation for Sustainability 1 is the first result of a unique positive confrontation between experts from all four communities It examines what SCP is and what it could be provides a state of the art review on the governance of change in SCP policy and looks at the strengths and weaknesses of current approaches The SCORE experts are working with actors in industry consumer groups and eco labelling organisations in the key consumption areas of mobility food and agriculture and energy use and housing responsible for 70% of the life cycle environmental impacts of Western societies with the aim of stimulating fostering or forcing change to SCP theory in practice The System Innovation for Sustainability series will continue with three further volumes of comprehensive case studies in each of these three critical consumption areas Each chapter of this book examines problems and suggests solutions from a business design consumer and system innovation perspective It primarily examines the differing solutions necessary in the consumer economies of the West but also comments on the differing needs in rapidly emerging economies such as China as well as base of the pyramid economies The System Innovation for Sustainability series is the fruit of the only major international research network on SCP and will set the standard in this field for some years to come It will be required reading for all involved in the policy debate on sustainable production and consumption from government business academia and NGOs for designers scientists businesses and system innovators

Key Topics in Landscape Ecology Jianguo Wu, Richard J. Hobbs, 2007-03-29 Landscape ecology is a relatively new area of study which aims to understand the pattern of interaction of biological and cultural communities within a landscape This book brings together leading figures from the field to provide an up to date survey of recent advances identify key research problems and suggest a future direction for development and expansion of knowledge Providing in depth reviews of the principles and methods for understanding landscape patterns and changes the book illustrates concepts with examples of innovative applications from different parts of the world Forming a current state of the science for the science of landscape ecology this book forms an essential reference for graduate students academics professionals and practitioners in ecology environmental science natural resource management and landscape planning and design Encyclopedia of Science and Technology Communication Susanna Hornig Priest, 2010-07-14 The explosion of scientific information is exacerbating the information gap between richer poorer educated less educated publics The proliferation of media technology and the popularity of the Internet help some keep up with these developments but also make it more likely others fall further behind This is taking place in a globalizing economy and society that further complicates the division between information haves and have nots and compounds the challenge of communicating about emerging science and technology to increasingly diverse audiences Journalism about science and technology must fill this gap yet journalists and journalism students themselves struggle to keep abreast of contemporary scientific developments Scientist aided by public relations and public information professionals must get their stories out not only to other scientists but also to broader public audiences Funding agencies increasingly expect their grantees to engage in outreach and education and such activity can be seen as both a survival strategy and an ethical imperative for taxpayer supported university based research Science communication often in new forms must expand to meet all these needs Providing a comprehensive introduction to students professionals and scholars in this area is a unique challenge because practitioners in these fields must grasp both the principles of science and the principles of science communication while understanding the social contexts of each For this reason science journalism and science communication are often addressed only in advanced undergraduate or graduate specialty courses rather than covered exhaustively in lower division courses Even so those entering the field rarely will have a comprehensive background in both science and communication studies This circumstance underscores the importance of compiling useful reference materials The Encyclopedia of Science and Technology Communication presents resources and strategies for science communicators including theoretical material and background on recent controversies and key institutional actors and sources Science communicators need to understand more than how to interpret scientific facts and conclusions they need to understand basic elements of the politics sociology and philosophy of science as well as relevant media and communication theory principles of risk communication new trends and how to evaluate the effectiveness of science communication programmes to mention just a few of the major challenges This work will help to develop and enhance such understanding as

it addresses these challenges and more Topics covered include advocacy policy and research organizations environmental and health communication philosophy of science media theory and science communication informal science education science journalism as a profession risk communication theory public understanding of science pseudo science in the news special problems in reporting science and technology science communication ethics **The Zoological Record** ,1995

characterised the many values systems people hold for the natural world the options and approaches society can deploy to manage it the extent to which we need entirely new economic systems to protect and sustain nature This highly interdisciplinary book invites consideration of a range of philosophical and applied debates and questions Written in an accessible style it is an ideal undergraduate text in the fields of ecology human and physical geography conservation science environment social science and spatial planning as well as a general primer for graduate natural and social scientists embarking on interdisciplinary research in the natural resource management arena *The Palgrave Encyclopedia of Urban and Regional Futures* Robert C.
