## **Homeostatic Control Function Detlev Boison:**

**Homeostatic Control of Brain Function** Detlev Boison, Susan Masino, 2016 Homeostatic Control of Brain Function offers a broad view of brain health and diverse perspectives for potential treatments targeting key areas such as mitochondria the immune system epigenetic changes and regulatory molecules such as ions neuropeptides and neuromodulators Loss of homeostasis becomes expressed as a diverse array of neurological disorders Each disorder has multiple comorbidities with some crossing over several conditions and often disease specific treatments remain elusive When current pharmacological therapies result in ineffective and inadequate outcomes therapies to restore and maintain homeostatic functions can help improve brain health no matter the diagnosis Employing homeostatic therapies may lead to future cures or treatments that address multiple comorbidities In an age where brain diseases such as Alzheimer s or Parkinson s are ever present the incorporation of homeostatic techniques could successfully promote better overall brain health Key Features include A focus on the homeostatic controls that significantly depend on the way one lives eats and drinks Highlights from emerging research in non pharmaceutical therapies including botanical medications meditation diet and exercise Incorporation of homeostatic therapies into existing basic and clinical research paradigms Extensive scientific basic and clinical research ranging from molecules to disorders Emerging practical information for improving homeostasis Examples of homeostatic therapies in preventing and delaying dysfunction Both editors Detlev Boison and Susan Masino bring their unique expertise in homeostatic research to the overall scope of this work This book is accessible to all with an interest in brain health scientist clinician student and lay reader alike

### **Neuronal mechanisms of epileptogenesis**

Roberto Di Maio, 2015-01-13 Several types of brain injuries are causes of acquired temporal lobe epilepsy TLE The seizure free latent period that often follows the brain injury is of unknown mechanistic significance but is commonly considered as the epileptogenic period characterized by gradual pathogenic processes leading to the onset of clinically detectable epilepsy Acute convulsive status epilepticus SE is often associated with an adverse developmental outcome characterized by learning disabilities related to the cumulative effects of seizures and development of TLE The symptomatic manifestations of TLE appear only after a widespread irreversible damage of entorhinal cortex and hippocampus the brain area most affected by this disease These pathological features of TLE reduce the possibility of successful therapeutic approaches often rendering the disease refractory The difficult clinical management of chronic TLE and the limited success rate of surgical approaches increase the incapacitating nature of this specific epileptic disorder Prevention of TLE with an appropriate intervention after a known inciting event in the case of acquired epilepsy might represent the most ambitious goal in the clinical treatment of this epileptic disorder but has been largely unsuccessful to this point Clinical trials aimed at prevention of chronic epilepsy have often produced negative disappointing results However in most cases these studies ultimately evaluated the downstream clinical manifestations failing to monitor early specific molecular epileptogenic events Therefore elucidation of

the underlying mechanisms of epileptogenesis and their time course s are essential The primary purpose of this topic is to collect scientific contributions providing novel insights in the cellular and molecular mechanisms of epileptogenesis as potential targets for innovative therapeutic approaches aimed at preventing the chronic epileptic disorder

**Homeostatic Control of Brain Function** Detlev Boison, Susan A Masino, 2015-11-03 Homeostatic Control of Brain Function offers a broad view of brain health and diverse perspectives for potential treatments targeting key areas such as mitochondria the immune system epigenetic changes and regulatory molecules such as ions neuropeptides and neuromodulators Loss of homeostasis becomes expressed as a diverse array of neurological disorders Each disorder has multiple comorbidities with some crossing over several conditions and often disease specific treatments remain elusive When current pharmacological therapies result in ineffective and inadequate outcomes therapies to restore and maintain homeostatic functions can help improve brain health no matter the diagnosis Employing homeostatic therapies may lead to future cures or treatments that address multiple comorbidities In an age where brain diseases such as Alzheimer s or Parkinson s are ever present the incorporation of homeostatic techniques could successfully promote better overall brain health Key Features include A focus on the homeostatic controls that significantly depend on the way one lives eats and drinks Highlights from emerging research in non pharmaceutical therapies including botanical medications meditation diet and exercise Incorporation of homeostatic therapies into existing basic and clinical research paradigms Extensive scientific basic and clinical research ranging from molecules to disorders Emerging practical information for improving homeostasis Examples of homeostatic therapies in preventing and delaying dysfunction Both editors Detlev Boison and Susan Masino bring their unique expertise in homeostatic research to the overall scope of this work This book is accessible to all with an interest in brain health scientist clinician student and lay reader alike

**Emotional Value in the Composition Classroom** Ryan Crawford, 2023-08-24 Using the concept of plasticity or the brain s ability to change through growth and reorganization as a theoretical framework this book argues that encouraging an exploration of the self better establishes emotional value in the composition classroom This book explores recent evidence from studies in modern neuroscience to provide biological correlations between current and developing theory and pedagogy in Composition Studies Starting with the concept of self each subsequent chapter builds a neurobiological understanding of how emotional value intrinsic motivation creativity and happiness are constructed and felt This material exploration shows how these factors can maintain motivation improve long term memory encourage creative risk and initiate complex considerations of being Recognizing the shift in Composition Studies to posthuman and new materialist methodologies this modern neuroscience is presented as a useful parallel to rather than being at odds with these and other current methodologies theories and pedagogies Outlining the need for a more student focused guided discovery framework for the composition classroom this interdisciplinary resource will be of interest to scholars and students in the field of Composition Studies Communication Studies Education Psychology and Philosophy

[Our Self-Organized Brains](#)

Oswaldo Agamennoni,2021-06-22 This book describes the dynamic nature of the brain and its mechanisms to develop cognitive skills specifically learning It will facilitate the reader s appreciation and understanding of many concepts linked to cognition using a systemic approach to neuroscience It introduces concepts of feedback control systems and self organized systems that allow brain dynamics to be approached systemically facilitating a holistic comprehension The book is written in plain language and uses a wide variety of examples to facilitate its reading and understanding It will serve to promote transdisciplinary communication in readers interested in the study of the fundamental dynamic aspects involved in the human learning process both individually and socially

**Adenosine** Susan Masino,Detlev Boison,2012-08-30 Homeostasis of key metabolites and metabolic health affects all bodily systems Not surprisingly altered metabolic function is associated with a wide spectrum of dysfunctions in the central nervous system including developmental disorders acute nervous system injury and neurodegenerative disorders Accordingly metabolism based therapies offer significant promise as new category of treatment options designed to limit delay or reverse the disease process by reconstructing homeostatic functions Increasingly it is appreciated that restoring metabolic health could promote normal nervous system activity and improve behavior and cognition Adenosine A Key Link Between Metabolism and Central Nervous System Activity focusses on diverse aspects of adenosine an evolutionarily conserved homeostatic bioenergetic regulator in the central nervous system Because of its interrelationship with ATP adenosine triphosphate adenosine is integral to cell metabolism At the same time adenosine influences neuronal activity directly via receptors and is involved in biochemical processes related to gene expression Thus adenosine is uniquely placed as a reciprocal and rapid link between changes in metabolism and changes in neuronal activity and on a longer time scale to changes in gene expression and long term changes in cell function Leaders in the field feature basic research on adenosine at the cellular level in the central nervous system and relate these findings to its recognized potential in diverse acute and chronic disorders This comprehensive overview of adenosine also highlights emerging adenosine based treatments and associated opportunities for central nervous system disorders

**Metabolic Control of Brain Homeostasis** Detlev Boison,Jochen C. Meier,Susan A. Masino,2017-10-03 Brain function is under metabolic control which in turn determines the equilibrium of homeostatic systems that affect neuronal and glial networks on the molecular cellular and systems levels The collection of articles ranges from molecules and mechanisms involved in regulating homeostasis and neuronal excitability to therapeutic mechanisms tailored to restore homeostatic function It also features neurological diseases and novel treatment approaches that are based on metabolic and homeostatic interventions Together the collection of articles outlines novel strategies to restore brain function in neurology and highlights limitations of conventional pharmacological approaches We suggest that restoration of molecular and biochemical networks could lead to a new era of therapeutic opportunities
