Space Race and cybernetics during the Cold War marked science and technology as vital sites of social and political power. Women artists historically excluded from these domains responded critically while simultaneously redeploying the products of Technological Society into works that promoted ideals of progress and alternative concepts of human community. In this innovative book, author Christine Filippone offers the first focused examination of the conceptual use of science and technology by women artists during and just after the women's movement. She argues that artists Alice Aycock, Agnes Denes, Martha Rosler, and Carolee Schneemann used science and technology to mount a critique on Cold War American society as they saw it conservative and constricting. Motivated by the contemporary American Women's Movement, these artists transformed science and technology into new modes of artmaking that transgressed modernist heroic painterly styles and subverted the traditional economic structures of the gallery, the museum, and the dealer. At the same time, the artists also embraced these domains of knowledge and practice as expressions of hope for a better future. Many found inspiration in the scientific theory of open systems, which investigated problems of wholeness, dynamic interaction, and organization, enabling consideration of the porous boundaries between human bodies and their social, political, and nonhuman environments. Filippone also establishes that the theory of open systems not only informed feminist art but also continued to influence women artists' practice of reclamation and ecological art through the twenty-first century.

Handbook of Research on Learning Outcomes and Opportunities in the Digital Age Wang, Viktor, 2015-12-22. Education and learning opportunities bring about the potential for individual and national advancement. As learners move away from traditional scholarly media and toward technology-based education, students gain an advantage with technology in learning about their world and how to interact with modern society. The *Handbook of Research on Learning Outcomes and Opportunities in the Digital Age* provides expert research relating to recent technological advancements, technology and learning assessments, and the effects of technology on learning environments, making it a crucial reference source for researchers, scholars, and professors in various fields.

Rapid Climate Change Scott G. McNall, 2012-08-06. The book reviews the science of climate change and explains why it is one of the most difficult problems humanity has ever tackled. Climate change is a wicked problem bound up with problems of population growth, environmental degradation, and world problems of growing social and economic inequality. The book explores the politicization of the topic, the polarization of opinion, and the reasons why for some, science has become just another ideology to be contested. How do humans assess risk? Why are they so bad at focusing on the future? How can we solve the problem of climate change? These are the questions this work answers. The goal of this new unique Series is to offer readable, teachable thinking frames on today's social problems and social issues by leading scholars, all in short 60-page or shorter formats and available for view on <http://routledge.customgateway.com/routledge/socialissues.html>. For instructors teaching a wide range of courses in the social sciences, the Routledge Social Issues Collection now offers the best of both worlds: originally written short texts that provide

overviews to important social issues as well as teachable excerpts from larger works previously published by Routledge and other presses Scientific and Technical Aerospace Reports ,1995 **Emergent Possibilities for Global Sustainability**
Phoebe Godfrey,Denise Torres,2016-06-17 It must be acknowledged that any solutions to anthropogenic Global Climate Change GCC are interdependent and ultimately inseparable from both its causes and consequences As a result limited analyses must be abandoned in favour of intersectional theories and practices Emergent Possibilities for Global Sustainability is an interdisciplinary collection which addresses global climate change and sustainability by engaging with the issues of race gender and class through an intersectional lens The book challenges readers to foster new theoretical and practical linkages and to think beyond the traditional and oftentimes reductionist environmental science frame by examining issues within their turbulent political cultural and personal landscapes Through a variety of media and writing styles this collection is unique in its presentation of a complex and integrated analysis of global climate change and its implications Its companion book Systemic Crises of Global Climate Change addresses the social and ecological urgency surrounding climate change and the need to use intersectionality in both theory and practice This book is a valuable resource for academics researchers and both undergraduate and post graduate students in the areas of Environmental Studies Climate Change Gender Studies and International studies as well as those seeking a more intersectional analysis of GCC
