PERSPECTIVE This book is important to everyone concerned with the design and development of people oriented systems The Manpower and Personnel Integration MANPRINT program is a major military system procurement initiative adopted by the Army to focus on the needs and capabilities of the soldier This program is unique in that it integrates six areas of user concerns which include human factors engineering manpower personnel training health hazards and system safety throughout the development cycle of Army materiel Even though MAN PRINT was developed for Army systems the philosophy and techniques used in this program extend well beyond military systems used by soldiers It can be applied to all products and systems used by people such as automobiles airplanes boats control rooms automated manufacturing telecommunications computers and medical equipment Interestingly the impetus for MAN PRINT came from the senior managers who buy these systems During the early and mid 1980s two Army generals M R Thurman and R M Elton who served successively as the Deputy Chief of Staff for Personnel were instrumental in fostering MANPRINT development By the end of the 1980s this program was integrated throughout the standard procurement system of the Army The formal statement of acquisition policy is contained in Army Regulation 602 2 **Airborne Weaponry Technology Program for Surface/aerospace Weaponry Technology** R. W. Van Aken,1985 *Notices of Changes in Classification, Distribution and Availability* ,1986 **Solar Power Plants** C.-J. Winter,Rudolf L. Sizmann,Lorin L. Vant-Hull,2012-12-06

In the introductory and concluding chapters this book strive to satisfy the needs of the interested lay reader by addressing the potential advantages and costs of solar power plants For the interested student scientist or technically oriented lay person the physical principles of insolation its variability concentration and most efficient use are developed in some detail Finally experimental and theoretical developments in the recently created field of solar driven chemistry via thermal quantum or electrical excitation are described The contributions in this book are written by leading solar scientists and engineering experts whose extensive background and experience in solar energy lend authenticity and completeness to the book Design aspects of and results from large experimental and demonstration plants are described by individuals who were directly involved in the design and testing of many of these plants Consideration of the viability and future economics of large scale solar power generation provides an outlook on the energy contributions which can be expected from an optional future supply of abundant and renewable energy having little impact on the environment This provides the rationale for the continued commitment to the development of solar power technologies by researchers engineers and industry The eventual depletion of or future political attacks on our energy supply

will have less serious impact once this renewable option is in place *AI, Simulation and Planning in High Autonomy Systems* Bernard P. Zeigler, Jerzy Rozenblit, 1990 **Monthly Catalog of United States Government Publications** ,1994
