

Building reinforced, diaphragm and wide plan freestanding walls

This Guide, for builders, designers and planners, presents rule of thumb guidance for stable construction of a range of common brick or blockwork wall types. Separate values for wall height and foundation width are given for increasing levels of exposure across the UK and solutions can be compared with complementary advice published for simple plan unreinforced walls (Good Building Guide 14).

The Guide includes notes on materials selection and good construction practice. The need for good supervision is stressed, particularly with reinforced walls, where a number of quite different building operations are involved which require careful coordination and execution.

The advice in this guide allows walls to be built up to a height of 2.5 m. Before starting you should check local planning restrictions, which may limit walls to a maximum height of 2 m or less.

Planning and design handbook on precast building structures FIB - Féd. Int. du Béton, 2014 In 1994 fib Commission 6 Prefabrication edited a successful Planning and Design Handbook that ran to approximately 45 000 copies and was published in Spanish and German Nearly 20 years later Bulletin 74 brings that first publication up to date It offers a synthesis of the latest structural design knowledge about precast building structures against the background of 21st century technological innovations in materials production and construction With it we hope to help architects and engineers achieve a full understanding of precast concrete building structures the possibilities they offer and their specific design philosophy It was principally written for non seismic structures The handbook contains eleven chapters each dealing with a specific aspect of precast building structures The first chapter of the handbook highlights best practice opportunities that will enable architects design engineers and contractors to work together towards finding efficient solutions which is something unique to precast concrete buildings The second chapter offers basic design recommendations that take into account the possibilities restrictions and advantages of precast concrete

along with its detailing manufacture transport erection and serviceability stages Chapter three describes the precast solutions for the most common types of buildings such as offices sports stadiums residential buildings hotels industrial warehouses and car parks Different application possibilities are explored to teach us which types of precast units are commonly used in all those situations Chapter four covers the basic design principles and systems related to stability Precast concrete structures should be designed according to a specific stability concept unlike cast in situ structures Chapter five discusses structural connections Chapters six to nine address the four most commonly used systems or subsystems of precast concrete in buildings namely portal and skeletal structures wall frame structures floor and roof structures and architectural concrete facades In chapter ten the design and detailing of a number of specific construction details in precast elements are discussed for example supports corbels openings and cutouts in the units special features related to the detailing of the reinforcement and so forth Chapter eleven gives guidelines for the fire design of precast concrete structures The handbook concludes with a list of references to good literature on precast concrete construction

Understanding Building Failures James Douglas,Bill Ransom,2013-04-12 Building defects still continue to plague the construction industry The lessons learned over the last forty years have not been fully applied Many new or refurbished buildings still leak or crack Lack of awareness by designers and installers as to the main mechanisms that trigger such failures remains a problem for the industry Investigating and rectifying building failures form a major part of building surveyors bread and butter work This book provides guidance on this work for typical residential commercial and industrial buildings with advice on how to diagnose a wide range of defects with an emphasis on evidence based practice throughout It considers both modern and older construction methods together with new and traditional materials The particular problems of alteration and renovation work are also discussed The first four chapters provide information and guidance on the methodology for investigating failures how to prepare for and conduct an investigation into a building defect and subsequently diagnose its cause in a logical manner This fourth edition has been updated and expanded to cover the latest diagnostic procedures and research It also includes Appendices and a new Bibliography and provides an extensive list of books on building pathology and related topics in the UK and North America It is essential reading for all students and practitioners interested in building surveying and building conservation

Designing Better Building Sebastian Macmillan,2004-07-31 Design is widely recognised as the key to improving the quality of the built environment This well illustrated book comprises 15 chapters written by leading practitioners clients academics and other experts and presents the latest thinking on what design quality is and how to achieve it For design practitioners and their clients alike the book provides evidence to justify greater focus on and investment in design It summarises the benefits that arise from good design such as civic pride in the urban environment the stimulation of urban regeneration corporate identity occupant productivity and health in offices improved learning outcomes in schools better patient recovery rates in hospitals as well as reduced environmental impact And it illustrates these benefits

through case study examples Eight chapters focus on case studies of exemplary buildings in particular sectors offices schools housing and hospitals and explain why and how they came to be designed and the design qualities they exhibit

Designing Better Buildings Sebastian Macmillan, 2004 Table of contents

Reducing carbon emissions from UK business Great Britain: Parliament: House of Commons: Environmental Audit Committee, 2008-03-10 The Climate Change Levy package is the second biggest element in the UK Climate Change Programme and savings appear to have been significant but were strongly front end loaded and have eased off since soon after its introduction The Levy will reduce annual UK CO2 emissions by 12.8 million tonnes by 2010 But these savings have come mainly from the effect its announcement had on raising awareness of the potential for energy savings and most of these savings were the result of actions taken before the tax actually came into operation The Levy itself has had relatively little effect on business emissions especially in the case of SMEs and large but non energy intensive organisations The Government believes that Climate Change Agreements CCAs will reduce annual CO2 emissions by an additional 7 million tonnes by 2010 Complying with CCAs has galvanised business interest in finding energy savings and that key to this has been the incentive of the tax discount they offer The exemptions on the Climate Change Levy for green electricity and combined heat and power have had minimal effect on the construction of new renewables and CHP capacity essentially because they are worth too little money The CCL package does not impose a damaging economic burden on UK business overall and is encouraging greater resource productivity and stimulating energy efficient industries The CCL has not worked quite as expected Instead of rationally seeking to reduce their costs through increased energy efficiency businesses appear to have needed an extra stimulus to change their approach to energy use This has profound implications for climate change policy more widely If even large companies require additional policies to drive behavioural change this must be all the more true for small businesses public bodies and private households

Delay and Disruption in Construction Contracts Andrew Burr, 2016-02-05 Delay and disruption in the course of construction impacts upon building projects of any scale Now in its 5th edition Delay and Disruption in Construction Contracts continues to be the pre eminent guide to these often complex and potentially costly issues and has been cited by the judiciary as a leading textbook in court decisions worldwide see for example *Mirant v Ove Arup* 2007 EWHC 918 TCC at 122 to 135 per the late His Honour Judge Toulmin CMG QC Whilst covering the manner in which delay and disruption should be considered at each stage of a construction project from inception to completion and beyond this book includes An international team of specialist advisory editors namely Francis Barber insurance Steve Briggs time Wolfgang Breyer civil law Joe Castellano North America David John Gibbs BIM Wendy MacLaughlin Pacific Rim Chris Miers dispute boards Rob Palles Clark money and Keith Pickavance

Comparative analysis of the law in this field in Australia Canada England and Wales Hong Kong Ireland New Zealand the United States and in civil law jurisdictions Commentary upon and comparison of standard forms from Australia Ireland New Zealand the United Kingdom USA and elsewhere including two major new forms New chapters on adjudication dispute boards and the civil law dynamic Extensive coverage of Building Information Modelling New appendices on the SCL Protocol Julian Bailey and the choice of delay analysis methodologies Nuhu Braimah Updated case law to December 2014 linked directly to the principles explained in the text with over 100 helpful Illustrations Bespoke diagrams which are available for digital download and aid explanation of multi faceted issues This book addresses delay and disruption in a manner which is practical useful and academically rigorous As such it remains an essential reference for any lawyer dispute resolver project manager architect engineer contractor or academic involved in the construction industry

Heating Systems, Plant and Control Antony R. Day, Martin S. Ratcliffe, Keith Shepherd, 2008-04-15 In many climates buildings are unable to provide comfort conditions for year round occupancy without the benefit of a heating system and most HVAC engineers will routinely be involved with issues concerning the design installation and performance of such systems Furthermore in temperate climates heating of buildings accounts for a large slice of annual carbon emissions The design of heating systems for maximum efficiency and minimum carbon emission is therefore now a matter of prime concern to all HVAC engineers The book provides an up to date review of the design engineering and control of modern heating systems Part A deals with heat generating plant While this concentrates on conventional and condensing boilers small scale combined heat and power systems and heat pumps are also discussed Part B deals with heat emitters pipe circuits and variable speed pumping hot water service optimum plant size and the vital issues of plant and system control including sequence control of multiple boilers Techniques for managing the energy use and running costs of heating systems are also discussed The authors have brought together over a half century of combined experience covering all aspects of the building services Industry to provide an up to date and comprehensive text that is both technically rigorous yet highly practical This makes the book equally relevant to the busy HVAC engineer looking for a handy practical reference the student looking to build on their basic knowledge or the researcher interested in key issues of heating

system design and performance **The Business of Greening** Stephen Fineman, 2017-10-19 The Business of Greening first published in 2000 debates the relationship between business and greening and the future form this relationship could take The book gives voice to industrial actors employees employers managers technical specialists regulators in the context of their organizations within industrial sectors or as part of wider institution regimes The business of greening is taken as socially constructed shaped through tensions and competing interests It produces outcomes that are sometimes unexpected sometimes hopeful These outcomes are explored by examining a range of workers including estate agents bankers bakers printers regulators in small and large corporations Contributors write from a wide range of different social sciences including sociology geography organizational science and psychology This title will be of particular interest to students and researchers of environmental and business studies and to those who shape environmental policy in government and industry

Mitchell's Structure & Fabric Part 1 J S Foster, 2013-09-13 A new edition of the best selling title in the prestigious Mitchell's Building Series This book is the first of a two volume set which provides a complete and thorough treatment of the principles and techniques used in the design and construction of a building This new edition has been thoroughly updated to bring it into line with recent changes in British Standards and developments in construction techniques while retaining the comprehensive approach for which it is renowned
