Physical Therapy Physical Therapy, American Physical Therapy Association, 1997 **Guide to Physical Therapist Practice, Volume One**, 1995 Use of the Guide to Physical Therapist Practice in Current Clinical Practice by Recent Graduates Heidi M. Benton, Matthew M. Calendrillo, Katie L. Olson, American Physical Therapy Association, 2005 Abstract PURPOSE The purpose of our study was to describe the use of the Guide to Physical Therapist Practice Guide in multiple clinical settings by recent graduates whose entry level coursework had incorporated the Guide SUBJECTS One hundred twenty seven entry level physical therapy PT graduates from class years between 1999 and 2003 voluntarily participated in the study Five subjects were excluded from the analysis secondary to not currently working as a physical therapist METHODS The researchers developed an 18 question Likert style survey that contained 5 parts demographics personal reference to the Guide Guide terminology person first language and a section dedicated to open comments on use of the Guide A pilot survey and expert review were conducted for content validation Experts included entry level 2004 graduates and PT faculty members who have incorporated the Guide into their teaching methods The researchers obtained a list of entry level PT graduates between the years 1999 2003 from an institution from New England Return envelopes were coded to track responses to facilitate a second mailing Confidentiality was maintained for each respondent ANALYSES Descriptive and

summary statistics were used to describe the constructs of the study. These constructs were based on use of the Guide in clinical settings, how the Guide was used in practice when the Guide was referenced in clinical settings, and use of terminology from the Guide in clinical practice. The statistics generated from both demographics and construct summaries included frequencies, cross tabulations, and a factorial ANOVA.

RESULTS

Our sample population consisted of 100 females (78%) and 27 males (21.3%). There was an even distribution of respondents from all class years, and the 122 respondents spanned 20 of the 50 states. Predominant states include Connecticut (21.5%), Massachusetts (20.7%), New York (15.7%), and New Jersey (7.4%). Length of PT practice ranged from 6 to 60 months, and the majority reported practicing full time (97.5%), as well as in hospital (22.1%) and outpatient clinics or offices (37.7%). Of the 122 respondents, 37.4% were American Physical Therapy Association (APTA) members. The Guide in any version was reported to be available in 48.8% of all clinical settings. The results from questions one through ten concerning personal use of the Guide had a 78% response rate of never. The Guide was not used as a primary resource in clinical practice as reported by 89.3% of respondents. With further investigations with factorial ANOVA, the researchers identified that clinical use increased under certain demographic conditions. Demographic variables that were noteworthy in association to increased use of the Guide compared to their counterparts were gender, current practice region, current clinical setting, APTA member, and availability of any version of the Guide in the clinical setting. A male APTA member from Connecticut, currently practicing in outpatient orthopedics, with a version of the Guide available was more likely to report a greater use of the Guide. Use of Guide terminology and use of person first language had an 87% or greater response of sometimes, always, or often.

CONCLUSION AND CLINICAL RELEVANCE

Although the entry level PT educational program incorporated the Guide in the curriculum, carryover of use into PT practice is not evident. Therefore, a dichotomy exists between the educational preparation and clinical practice; the goals or purposes for the Guide may not be fully met as proposed.
