Comas-Díaz, 2012 Culture is the proverbial elephant sitting in the middle of one's consulting room. If one ignores this elephant, he or she runs the risk of collision. Notably, if one approaches culture from a reductionistic perspective, he or she may reenact the fable of the blind men touching different parts of the elephant and misidentifying the animal. In other words, the clinician ends up misinterpreting the effects of culture on clinical practice. Instead, when one recognizes the role of culture, he or she develops an approach to clinical care that examines the impact of context on clients, ourselves, and the world. My intention in writing this book is to help clinicians increase their clinical cultural competence. Although there are numerous resources on cultural competence, they tend to emphasize the training of graduate students as opposed to the continuing education of practicing clinicians. Rogers Sirin (2008) intends for this book to bridge this gap by offering resources to graduate students, clinicians in training, novice therapists, and seasoned practitioners alike. To facilitate the journey toward cultural competence, I propose the adoption of a multicultural care perspective. This approach involves enhancing understanding of clients' contexts, developing a multicultural therapeutic relationship, and adapting the healing approach to clients' needs. As a clinician, you already have most of what you need to endorse a multicultural care approach. You can become a multicultural caring clinician without abandoning your theoretical orientation. At the core of multicultural care is a desire to work with multicultural clients. Although all people have cultures, I use the term multicultural individuals to refer to culturally different individuals and/or people of color.

Cultural Competence in Clinical Psychiatry Wen-Shing Tseng, Jon Streltzer, 2008-05-20. Building on their previous works about cultural competency in clinical areas and in psychotherapy, the editors have created in this volume an exceptional and entirely new approach to understanding and acquiring cultural competency. Instead of examining populations of different ethnic groups, particularly minority groups as is typical in the literature, this illuminating volume examines cultural issues as applied to the practice of virtually every psychiatric service, e.g., inpatient, outpatient, consultation-liaison, pain management, and emergency, and specialty, e.g., child and adolescent, geriatric, addiction, and forensic psychiatry. Concluding chapters discuss cultural factors in psychopharmacology and psychotherapy. Thirteen distinguished contributors bring these issues to life with numerous case vignettes in all 11 chapters. The foundation

for this breakthrough approach rests on Culture The unique behavior patterns and lifestyle that encompass a set of views beliefs values and attitudes shared by a group of people that distinguish it from other groups Culture and people influence each other reciprocally and interactionally on a conscious or unconscious level Cultural competence Clinicians need to master cultural sensitivity knowledge and empathy they need to be flexible and they need to be skilled in culturally relevant doctor patient relationships and interactions and to know how to use these elements therapeutically The critical importance of cultural competence Clinicians typically work in multiethnic cultural societies providing care for patients of diverse backgrounds For this reason virtually all clinical practice can be seen as transcultural Even when clinicians treat patients who share cultural backgrounds similar to their own it is inevitable that some differences exist Further in the medical setting three types of culture are present the culture of the patient the culture of the physician and the medical culture in which the clinical work is practiced Understanding these three cultural dimensions is essential to comprehending and carrying out culturally competent clinical work This practical and innovative guide designed to help mental health care professionals meet the new requirements for cultural competence in clinical work will find a welcoming audience among students residents educators and clinicians everywhere
