Markets And Mortality Economics Dangerous Work And The Value Of Human Life:

Markets and Mortality Peter Dorman, 2009-11-12 This book provides a critical survey of conventional economic approaches to occupational safety and the analysis of environmental risk in general The author concludes that unsafe work is not voluntary that markets do not compensate workers for risk and that attempts to put a monetary value on life and health are futile He attributes the shortcomings of economic orthodoxy to its underlying approach to human decision making and social interaction and demonstrates that useful alternative approaches are available The analysis is used to identify policies that combine effective regulation with democratic values

Markets and Mortality Peter Dorman, 1996-02-23 In this book the author examines and ultimately rejects the conventional economic view that workers who have more dangerous jobs accept their risks voluntarily and are compensated through higher wages In doing so he attacks widely used techniques for assigning a monetary value to human life for cost benefit analysis and other purposes Arguments are drawn from the history of occupational safety and health econometric analysis of wage and risk data and formal models of the labour market In place of the conventional view Peter Dorman proposes a view based on new work in decision theory thick rationality and the theory of repeated games These insights are combined with comparative policy analysis to support an approach to risk that promotes both regulatory effectiveness and democratic values Despite its technical content the book is written in highly accessible style and is concerned with matters of general interest in the development of critical social science The Value

of Life Rune Elvik, 2018-06-11 Research on the monetary value of saving life and limb has produced results most laypeople would regard as nonsensical however researchers continue to try to make sense of these bewildering results and produce new studies An almost forgotten theory of science can explain why this is so Studies designed to obtain monetary valuations of life and limb have produced extremely diverse results There is no consensus among researchers working in the field about the best research methods or the most credible results of research However this field of study continues to thrive The methodology of scientific research programmes a theory of science developed by the late philosopher Imre Lakatos can help explain why a particular field of study continues to exist despite not producing meaningful or easily interpreted results Readers of the book will gain insight into internal norms of science that guide researchers to continue to pursue studies even if the findings taken at face value contradict the theoretical foundations of the research Scientific theories can be upheld even when the evidence against them seems to be massive

Catholic Values and Australian Realities James Franklin, 2006 Australian Catholics have made a unique contribution to the nation At its centre is a solid grasp of the objectivity of ethics Persons or societies cannot choose their own values because what is right and wrong is founded in the way things are In his wide ranging book on Australian Catholic thought and action James Franklin author of the much praised polemical history of Australian philosophy *Corrupting the Youth* shows how core Catholic values have played out in the issues where Catholics have challenged their host society in debates on land rights immigration and values in schools and in

combats with Freemasons Protestants and Communists

The Economic Analysis of Public Policy Mary Jean Bowman, George Leland Bach, 1949

Costs of Occupational Injuries and Illnesses J. Paul Leigh, 2000 As the debate over health care reform continues costs have become a critical measure in the many plans and proposals to come before us Knowing costs is important because it allows comparisons across such disparate health conditions as AIDS Alzheimer's disease heart disease and cancer This book presents the results of a major study estimating the large and largely overlooked costs of occupational injury and illness costs as large as those for cancer and over four times the costs of AIDS The incidence and mortality of occupational injury and illness were assessed by reviewing data from national surveys and applied an attributable risk proportion method Costs were assessed using the human capital method that decomposes costs into direct categories such as medical costs and insurance administration expenses as well as indirect categories such as lost earnings and lost fringe benefits The total is estimated to be 155 billion and is likely to be low as it does not include costs associated with pain and suffering or of home care provided by family members Invaluable as an aid in the analysis of policy issues Costs of Occupational Injury and Illness will serve as a resource and reference for economists policy analysts public health researchers insurance administrators labor unions and labor lawyers benefits managers and environmental scientists among others J Paul Leigh is Professor in the School of Medicine Department of Epidemiology and Preventive Medicine University of California Davis Stephen Markowitz M D is Professor in the Department of Community Health and Social Medicine City University of New York Medical School Marianne Fahs is Director of the Health Policy Research Center Milano Graduate School of Management and Urban Policy New School University Philip Landrigan M D is Wise Professor and Chair of the Department of Community Medicine Mount Sinai Medical Center New York
