Green Plastics Introduction Biodegradable Plastics:

Green Plastics E. S. Stevens, 2020-06-16 Plastics are everywhere Bags bank cards bottles and even boats can all be made of this celebrated but much maligned material Yet most of us know next to nothing about plastics We do know that they are practical and cheap but they also represent a huge environmental problem for they literally take ages to decompose In this engaging book E S Stevens tells us everything we have always wondered about plastics and of the efforts in America Europe and Asia to develop a new breed of environmentally friendly plastics He points to a possible future where plastics will no longer be made of petroleum but of plants The first two chapters assess the increased use of plastics as a relatively new alternative to other materials The third chapter introduces us to their impact on the environment and strategies for their disposal or recycling The next two chapters cover basic concepts and terms used in polymer sciences and provide some basic chemistry With these fundamentals in tow the author compares how petroleum based and biological polymers are made and the various ways in which they decompose He acquaints readers with the emerging technologies their commercial viability and their future Finally instructions are given for preparing basic bioplastics using readily available materials Nonspecialists will find *Green Plastics* a concise introduction to this exciting interdisciplinary topic an introduction otherwise not available For students it provides easy entry to an area of science with wide appeal and current importance for teachers excellent background reading for courses in various sciences The prospect of depleted fossil fuel supplies and the potential benefits of bioplastics to the environment and to rural areas that could supply the raw materials make this book a compelling presentation of a subject whose time has come

The Complete Book on Biodegradable Plastics and Polymers (Recent Developments, Properties, Analysis, Materials & Processes) NIIR Board of Consultants & Engineers,2006-10-01 Biodegradable plastics made with plant based materials have been available for many years The term biodegradable means that a substance is able to be broken down into simpler substances by the activities of living organisms and therefore is unlikely to persist in the environment There are many different standards used to measure biodegradability with each country having its own The requirements range from 90 per cent to 60 per cent decomposition of

the product within 60 to 180 days of being placed in a standard composting environment They may be composed of either bio plastics which are plastics whose components are derived from renewable raw materials or petroleum based plastics which contain additives Biodegradability of plastics is dependent on the chemical structure of the material and on constitution of the final product not just on the raw materials used for its production Polyesters play a predominant role as biodegradable plastics due to their potentially hydrolysable ester bonds Bio based polymers are divided into three categories based on their origin and production polymer directly extracted from biomass polymers produced by classical chemical synthesis using renewable biomass monomer and polymers produces by microorganisms or genetically modified bacteria In response to public concern about the effects of plastics on the environment and in particular the damaging effects of sea litter on animals and birds legislation is being enacted or is pending in many countries to ban non degradable packing finishing nets etc This book basically deals with biodegradable plastics developments and environmental impacts hydro biodegradable and photo biodegradable starch synthetic aliphatic polyester blends difference between standards for biodegradation polybutylene succinate pbs and polybutylene recent developments in the biopolymer industry recent advances in synthesis of biopolymers by traditional methodologies polymers environmentally degradable synthetic biodegradable polymers as medical devices polymers produced from classical chemical synthesis from bio based monomers potential bio based packaging materials conventional packaging materials environmental impact of bio based materials biodegradability and compostability etc Environmentally acceptable degradable polymers have been defined as polymers that degrade in the environment by several mechanisms and culminate in complete biodegradation so that no residue remains in the environment The present book gives thorough information to biodegradable plastic and polymers This is an excellent book for scientists engineers students and industrial researchers in the field of bio based materials TAGS Bioplastics and Biodegradable Plastics Biodegradable Plastics and Polymers Biodegradable Products Biodegradable Plastics from Waste How to Make Biodegradable Plastic Biodegradable Plastic Bags Biodegradable Plastic Bottles Biodegradable Plastic Manufacture Producing Biodegradable Plastic Starch Based Biodegradable Plastics Biodegradable Plastic Packaging Bio Based Biodegradable Plastics Biobased and Biodegradable Plastic Biodegradable Polymers Biodegradable Polymers Plastic Biodegradable Polymer Materials Synthetic Biodegradable Polymers Biodegradable Polymers Production of Biodegradable Polymers Degradation of Biodegradable Polymers Starch Based Bio Plastics Biodegradable Polyesters Polyester Based Bio Degradable Polymers Polyhydroxyalkanoates PHBH Polyesters PLA Polyesters Degradation Mechanism Coated Paper Agricultural Mulch Film Shopping Bags Plastic Sorting and Reprocessing Biopolymer Industry Industrial Biopolymer Fiber Reinforced Composites Natural Polymers Environmentally Degradable Polymers Production of Environmentally Degradation Polymers Synthetic Biodegradable Polymers as Medical Devices Natural and Synthetic Biodegradable Polymers Degradation of Commercial Biodegradable Commercial Biodegradable Material Biobased Packaging Materials for Food Industry Bio Food Packaging Compostable Packaging Bio
