Houdas, E.F.J. Ring, 2013-06-29 The physiology of man is a complex subject Unfortunately the regulation of temperature in the human body is not always well explained in textbooks Many conference proceedings on the subject have been produced that give excellent detail on research topics However the subject matter is rarely presented as a composite whole New technology has broadened the scope of methods available for studying body temperature Thermography in particular has made it possible to record in real time the temperature distribution of large areas of the body surface Modern image processing methods permit dynamic studies to be carried out and detailed analyses made retrospectively a tremendous advance over the complex and slow techniques formerly used by physiologists Yet although the association between disease and temperature is as old as medicine itself beyond the implicit faith in the clinical mercury thermometer other measuring techniques are finding a slow

acceptance This book is designed to put into perspective the critical factors that make up body temperature Body temperature cannot be viewed as a static entity but rather must be seen as a dynamic process An understanding of this phenomenon is important to all who use thermal imaging and measuring techniques in clinical medicine These methods have in recent years brought engineers physicists technicians and clinicians together Inevitably however there are gaps and overlaps in technology and understanding

M.Heinrich Seegenschmiedt,Rolf Sauer,2012-12-06 The use of hyperthermia in radiation oncology is well established Many publications cover the whole field of possibilities and problems of this therapeutic modality The new development of interstitial and intracavitary hyperthermia however is not well known there are only a few relevant publications in different journals Therefore it was appropriate that SAUER and SEEGENSCHMIEDT organized an international meeting on this topic where experiences with this new and promising technique were compiled and discussed by experts The papers of this symposium together with additional review papers and clinical studies are published in this volume The publication begins with the physical and biological background of interstitial and intracavitary hyperthermia continues with comprehensive review papers on clinical topics and then gives examples for a wide variety of clinical applications This volume will contribute to better understanding and application of the treatment possibilities of radio oncology in combination with this new treatment modality
