The Madame Curie Complex Julie Des Jardins,2010-03-01 The historian and author of *Lillian Gilbreth* examines the Great Man myth of science with profiles of women scientists from Marie Curie to Jane Goodall Why is science still considered to be predominantly male profession In *The Madame Curie Complex* Julie Des Jardin dismantles the myth of the lone male genius reframing the history of science with revelations about women s substantial contributions to the field She explores the lives of some of the most famous female scientists including Jane Goodall the eminent primatologist Rosalind Franklin the chemist whose work anticipated the discovery of DNA s structure Rosalyn Yalow the Nobel Prize winning physicist and of course Marie Curie the Nobel Prize winning pioneer whose towering mythical status has both empowered and stigmatized future generations of women considering a life in science With lively anecdotes and vivid detail *The Madame Curie Complex* reveals how women scientists have changed the course of science and the role of the scientist throughout the twentieth century They often asked different questions used different methods and came up with different groundbreaking explanations for phenomena in the natural

world **Good Observers of Nature** Tina Gianquitto, 2010-01-25 In *Good Observers of Nature* Tina Gianquitto examines nineteenth century American women's intellectual and aesthetic experiences of nature and investigates the linguistic perceptual and scientific systems that were available to women to describe those experiences. Many women writers of this period used the natural world as a platform for discussing issues of domesticity, education and the nation. To what extent, asks Gianquitto, did these writers challenge the prevalent sentimental narrative modes like those used in the popular flower language books and use scientific terminology to describe the world around them? The book maps the intersections of the main historical and narrative trajectories that inform the answer to this question: the changing literary representations of the natural world in texts produced by women from the 1820s to the 1880s and the developments in science from the Enlightenment to the advent of evolutionary biology. Though Gianquitto considers a range of women's nature writing: botanical manuals, plant catalogs, travel narratives, seasonal journals, scientific essays, she focuses on four writers and their most influential works: Almira Phelps' *Familiar Lectures on Botany* (1829), Margaret Fuller's *Summer on the Lakes* (1843), Susan Fenimore Cooper's *Rural Hours* (1850) and Mary Treat's *Home Studies in Nature* (1885). From these writings emerges a set of common concerns about the interaction of reason and emotion in the study of nature, the best vocabularies for representing objects in nature, local scientific or moral and the competing systems for ordering the natural world: theological, taxonomic or aesthetic. This is an illuminating study about the culturally assumed relationship between women, morality and science.

The Establishment of Science in America Sally Gregory Kohlstedt, Michael Mark Sokal, Bruce V. Negotiating Boundaries? Identities, Sexualities, Diversities Clare Beckett, Marie Macey, Owen Heathcote, 2009-05-05 *Negotiating Boundaries: Identities, Sexualities, Diversities* is a collection of essays by contributors from and/or on societies across the world: Bosnia Herzegovina, Croatia, France, Iran, The Netherlands, New Zealand, Poland, South and West Africa, the UK and the USA. They are from a range of academic disciplines: English Literature, Islamic and Middle Eastern Studies, Literary and Cultural Studies, Modern Languages, Religious Studies, Social Anthropology, Social Policy, Sociology and Theology. This level of diversity has resulted in the most wide-ranging volume ever published in the social sciences and humanities around the concept of Boundaries. The book is at the cutting edge of intellectual thinking on personal and social boundaries applied to such areas as Art, Genocidal Rape, Identities, God, Godde, Lesbianism, Literature, Men in Women's Professions, Muslim women in Muslim and non-Muslim countries, Nationalism and Symbolism, Poetry, Religion, Sexual Harassment, Sexuality, Women in Science, Transgenderism, Virginity Testing and War. This range of contributors, locations and topics could have resulted in an incoherent volume with appeal to only a somewhat esoteric readership. However, the skilful use of the concept of Boundaries not only gives this book structured coherence but makes it important.

Science, Technologies and Material Culture in the History of Education Heather Ellis, 2020-05-18 Developed out of a 2015 conference of the History of Education Society UK this book explores the interconnections between the histories of science technologies and material culture and the history of education The

contributions express a shared concern over the extent to which the history of science and technology and the history of education are too frequently written about separately from each other despite being intimately connected. This state of affairs they suggest is linked to broader divisions in the history of knowledge which has for many years been carved up into sections reflective of the academic subject divisions that structure modern universities and higher education in the West. Most noticeably this has occurred with the history of science but more recently the history of humanities has been divided as well. The contributions to this volume demonstrate the diversity and originality of research currently being conducted into the connections between the history of science and the history of education. The importance of objects in teaching and their value as pedagogical tools emerges as a particularly significant area of research located at the intersection between the two fields of enquiry. Indeed it is the materiality of education a focus on the use of objects pedagogical practices and particular spaces which seems to offer some of the most promising avenues for exploring further the relationship between the histories of science and education. This book was originally published as a special issue of the *History of Education*.

Debating Contemporary Approaches to the History of Science Lukas M. Verburgt, 2024-01-11. *Debating Contemporary Approaches to the History of Science* explores the main themes problems and challenges currently at the top of the discipline's methodological agenda. In its chapters established and emerging scholars introduce and discuss new approaches to the history of science and revisit older perspectives which remain crucial. Each chapter is followed by a critical commentary from another scholar in the field and the author's response. The volume looks at such topics as the importance of the global digital environmental and posthumanist turns for the history of science and the possibilities for the field of moving beyond a focus on ideas and texts towards active engagement with materials and practices. It also addresses important issues about the relationship between history of science on the one hand and philosophy of science history of knowledge and ignorance studies on the other. With its innovative format this volume provides an up to date authoritative overview of the field and also explores how and why the history of science is practiced. It is essential reading for students and scholars eager to keep a finger on the pulse of what is happening in the history of science today and to contribute to where it might go next.
