KEY CONCEPT Biologists study life in all its forms.

MAIN IDEAS

- Earth is home to an incredible diversity of life.
- All organisms share certain characteristics.

 Connect to Your World

It's a warm summer evening. Maybe you're laughing and joking while waiting to eat at a family barbecue. As you sit down for dinner, mosquitoes flying around have the same idea. But their dinner is you, not the barbecue. Probably the most attention that you pay to mosquitoes is when you take careful aim before smacking them. Biologists have a somewhat different view of mosquitoes, unless of course they are the ones being bitten. But from a less emotional perspective, a biologist can see a mosquito as just one example of the great diversity of life found on Earth.

 MAIN IDEA

Earth is home to an incredible diversity of life.

In Yellowstone National Park, there are pools of hot water as acidic as vinegar. It might be difficult to believe, but those pools are also full of life. Life is found in the darkness of the deepest ocean floors and in thousands-of-years-old ice in Antarctica. Not only are living things found just about anywhere on Earth, but they also come in a huge variety of shapes and sizes. Plants, for example, include tiny mosses and giant redwood trees on which moss can grow. There are massive animals such as the blue whale, which is the largest animal living on Earth. There are tiny animals such as the honeypot ant in **FIGURE 1.1**, which

can store so much food for other ants that it swells to the size of a grape.

The Biosphere

All living things and all the places they are found on Earth make up the **biosphere**. Every part of the biosphere is connected, however distantly, with every other part of the biosphere. The biosphere includes land environments such as deserts, grasslands, and different types of forests. The biosphere also includes saltwater and freshwater environments, as well as portions of the atmosphere. And different types of plants, animals, and other living things are found in different areas of the

biosphere. Even the inside of your nose, which is home to bacteria and fungi, is a part of the biosphere.

FIGURE 1.1 Honey pot ants live in deserts where food and water are scarce. Some of the ants in the colony act as storage tanks for other ants in the colony.
