Problem 20D**CURRENT IN AND POTENTIAL DIFFERENCE ACROSS A RESISTOR****PROBLEM**

For the circuit from the previous section's sample problem, determine the current in and potential difference across the $8.0\ \Omega$ resistor (R_4) in the figure below.

**REASONING**

First find the equivalent resistance of the circuit. From this, determine the total circuit current. Then rebuild the circuit in steps, calculating the current and potential difference for the equivalent resistance of each group until the current in and potential difference across the specified $8.0\ \Omega$ resistor are known.

SOLUTION**1. Determine the equivalent resistance of the circuit.**

The equivalent resistance, which was calculated in the sample problem of the previous section, is $5.9\ \Omega$.

2. Calculate the total current in the circuit.

Substitute the potential difference and equivalent resistance in $\Delta V = IR$, and rearrange the equation to find the current delivered by the battery.

$$I = \frac{\Delta V}{R_{eq}} = \frac{(12.0\text{ V})}{(5.9\ \Omega)} = 2.0\text{ A}$$

3. Determine a path from the equivalent resistance found in step 1 to the specified resistor.

Review the path taken to find the equivalent resistance in the diagram below, and work backward through this path. The equivalent resistance for the entire circuit is the same as the equivalent resistance for group (c). The top resistors in group (c), in turn, form the equivalent resistance for group (b), and the rightmost resistor in group (b) is the specified $8.0\ \Omega$ resistor.

Soviet Scientists and the State Peter Kneen, 1985-06-30 **Soviet Scientists and the State** examines the constraints place upon the natural scientist in the Soviet Union The book brings into sharp relief the social and economic consequences arising from the highly centralized character of Communist Party rule Because conditions regarded as essential for effective scientific research conflict with the form of political control prevailing in the Soviet Union the Soviet scientists working environment provides a fruitful context for assessing the methods adopted by the Communist Party This study is an excellent base from which to explore some important sources of change in contemporary Soviet politics The book is also a survey of the present state of natural science in the U S S R Topics of concern range from the scientists background and social characteristics institutions status and leadership to their social relations and effectiveness The relationship of the Communist Party to the scientists is examined in detail

Social Work Constructivist Research Mary Katherine O'Connor, 2015-12-22 This is the first textbook to offer a clear concise articulation of the dimensions of constructivism relevant to social work practice and research Professor Rodwell recognizes the need to systematize a process of knowledge building and presents specific techniques to accomplish that while maintaining an interpretative stance with the focus on meaning Social work students will see that their basic way of engaging clients in an assessment and problem solving process is very much in keeping with constructivist research practice In addition to delineating the philosophical assumptions of constructivism this very practical text is geared to classroom use with chapters on research design rigor data collection data analysis research oversight and presentation of results Social Work

Constructivist Research is divided into four sections that together should give the reader the intellectual and practical background necessary to understand and undertake rigorous constructivist inquiry. The structure of this textbook is intended to provide the reader with sufficient information to competently confront all the design implementation and reporting elements of a constructivist inquiry process. At the completion of all sections, readers will know how the assumptions of constructivism differ from mainstream research, primarily characterized by positivism or post positivism. Readers will know how rigor expectations for research methods derived from different assumptions also differ. They will know how to determine the feasibility of undertaking a constructivist inquiry when and where it is possible, manage an emergent design, and establish the trustworthiness and authenticity dimensions of a rigorous research effort. For those interested in constructivist research and its relevancy to social work, this book will prove to be a necessary resource.

Killham, 2023-01-01. Science is unique among the disciplines since it is inherently hands on. However, the hands on nature of science instruction also makes it uniquely challenging when teaching in virtual environments. How do we as science teachers deliver high quality experiences to secondary students in an online environment that leads to age grade level appropriate science content knowledge and literacy but also collaborative experiences in the inquiry process and the nature of science? The expansion of online environments for education poses logistical and pedagogical challenges for early childhood and elementary science teachers and early learners. Despite digital media becoming more available and ubiquitous and increases in online spaces for teaching and learning, Killham et al (2014), Wong et al (2018), PreK-12 teachers consistently report feeling underprepared or overwhelmed by online learning environments. Molnar et al (2021), Seaman et al (2018). This is coupled with persistent challenges related to elementary teachers' lack of confidence and low science teaching self-efficacy. Brigid Borrachero Bermejo, Gunning Duran, Duran (2004). Ideal for undergraduate teacher candidates, graduate students, teacher educators, classroom teachers, parents, and administrators, this book addresses why and how teachers use online environments to teach science content and work with elementary students through a research-based foundation.

The idea that morally, mentally, and physically superior new men might replace the currently existing mankind has periodically seized the imagination of

intellectuals leaders and reformers throughout history This volume offers a multidisciplinary investigation into how the new man was made in Russia and the early Soviet Union in the first third of the 20th century The traditional narrative of the Soviet new man as a creature forged by propaganda is challenged by the strikingly new and varied case studies presented here The book focuses on the interplay between the rapidly developing experimental life sciences such as biology medicine and psychology and countless cultural products ranging from film and fiction dolls and museum exhibits to pedagogical projects sculptures and exemplary agricultural fairs With contributions from scholars based in the United States Canada the UK Germany and Russia the picture that emerges is emphatically more complex contradictory and suggestive of strong parallels with other new man visions in Europe and elsewhere In contrast to previous interpretations that focused largely on the apparent disconnect between utopian new man rhetoric and the harsh realities of everyday life in the Soviet Union this volume brings to light the surprising historical trajectories of new man visions their often obscure origins acclaimed and forgotten champions unexpected and complicated results and mutual interrelations In short the volume is a timely examination of a recurring theme in modern history when dramatic advancements in science and technology conjoin with anxieties about the future to fuel dreams of a new and improved mankind
